Subject Index

Air infiltration
  modelling of, in single- and multi-cell buildings, 185

Building
  medieval sheltered, thermal behaviour of, 19
Building energy analysis simulation programs
  validation of, at the Solar Energy Research Institute, 221
Building energy simulation
  an introduction, 157
  a user's perspective, 241
  advances in, in North America, 161
  advances in, in the U.K. — the Science and Engineering Council's programme, 175
Building thermal model
  analytical and inter-program validation of a, 121

Climate change
  impact of CO_2-induced, on residential heating and cooling energy requirements in Ontario, Canada, 99
Climate indications
  estimation of infiltration from leakage and, 81
Climatic conditions
  artificial, thermal experiments of full-scale dwelling cells in, 49
Computing
  some trends in: the implications for simulation, 249
Control system simulation
  computer control, 203
  in North America, 193
Convection coefficients
  effect of variations in, on thermal energy storage in buildings: Part II. Exterior massive walls and simulations, 29

Electricity use
  distribution of the intensity of, in commercial premises appears to be highly skewed, 151
Energy consumption
  influence of modifications in a central heating system of a dwelling on the, calculated with a dynamic model, 1
Energy kernel system
  259
Energy performances
  using Markovian stochastic modelling to predict, and thermal comfort of passive solar systems, 135
Energy-use behavior
  household, a method for self-recording, 73

Heating and cooling energy requirements
  residential, impact of CO_2-induced climate change on, in Ontario, Canada, 99

Infiltration
  air, modelling of, in single- and multi-cell buildings, 185
  estimation of, from leakage and climate indicators, 81

Markovian stochastic modelling
  using, to predict energy performances and thermal comfort of passive solar systems, 135
Modal analysis
  application of, to modelling of thermal bridges in buildings, 109
Modelling of air infiltration
  in single- and multi-cell buildings, 185
Modifications
  influence of, in a central heating system of a dwelling on the energy consumption, calculated with a dynamic model, 1

Science and Engineering Research Council's programme
  advances in building energy simulation in the U.K., 175
Simulation(s)
  building energy
    an introduction, 157
    a user's perspective, 241
    advances in, in North America, 161
    advances in, in the U.K. — the Science and Engineering Research Council's programme, 175
  control system
    computer control, 203
    in North America, 193
  exterior massive walls and; effect of variations in convection coefficients on thermal energy storage in buildings. Part II, 29
  implications for; some trends in computing, 249
Solar Energy Research Institute
  validation of building energy analysis simulation programs at the, 221
Solar systems
  passive, using Markovian stochastic modelling to predict energy performances and thermal comfort of, 135

Thermal behaviour
  of a medieval sheltered building, 19
Thermal bridges in buildings
  application of modal analysis to modelling of, 109
Thermal comfort
  using Markovian stochastic modelling to predict energy performances and, of passive solar systems, 135
Thermal effects
  transient three-dimensional window, 89

© Elsevier Sequoia/Printed in The Netherlands

Thermal energy storage
effect of variations in convection coefficients on, in buildings: Part II. Exterior massive walls and simulations, 29

Thermal experiments
of full-scale dwelling cells in artificial climatic conditions, 49

Thermal model(s)
building, analytical and inter-program validation of a, 121
dynamic, validation of, 213

Thermal performance monitoring
a low-cost methodology for, of public schools in the Lombardy region, 59

Validation
analytical and inter-program, of a building thermal model, 121
of building energy analysis simulation programs at the Solar Energy Research Institute, 221
of dynamic thermal models, 213

Window thermal effects
transient three-dimensional, 89
